Physiotherapy Department

As a physical therapist engaged in rehabilitation medicine, you will learn the skills to judge a patient’s situation appropriately, and how to make an optimal treatment plan from the advice of lead practitioners. We place an emphasis on human resources with problem-solving skills and developmental learning, and raise up health care professionals who can become leaders in the field of physical therapy within team medicine.

Unique Characteristics of Our School

1. Courses and subjects that teach cutting-edge skills.
   We train highly skilled physical therapists with an ability to respond appropriately to rapidly advancing, high-tech and cutting-edge medical techniques.

2. Careful instruction for each individual student.
   With training supervisors in place, by implementing small-group seminar classes and the like, we can provide very detailed instruction.

3. General study of 6 specialist fields.
   With teaching by a staff of instructors specializing in each of 6 fields of physical therapy and specialized facilities, you can engage in comprehensive study.

4. With high-quality training you can hone your practical skills.
   On top of on-campus training we provide clinical training suited to your field of specialization. You can learn the high-level skills required in the field.

5. Hammering out applied skills through advanced learning.
   Using comprehensive applied courses to deepen developmental study, we inculcate flexible applied skills that can address increasingly sophisticated medical issues.

Judo Therapy Department

Judo therapy is an osteopathy art that utilizes ancient traditions as a traditional medical form that contains elements of Western medicine and martial osteopathy. We train people who can make judgments based on logic grounded in scientific evidence and furthermore possess the sense and care to know what the patient needs.

Unique Characteristics of Our School

1. We operate on a homeroom system, eliminating any feeling of unease about studies or university life.
   With the homeroom and school-based tutor systems, we provide all-embracing support for the campus life of each of our students.

2. A variety of unique courses.
   In order to engage in treatment based on scientific evidence, we have a variety of special courses such as “bare-handed treatment”, “sports medicine”, etc.

3. Practical training that emphasizes the relationship between knowledge and the skills to live.
   As it is considered that knowledge acquired is not partial or superficial but really sinks in, our teaching style emphasizes hands-on practice.

4. Deepening research into judo therapy.
   From their 3rd year, students learn concrete research techniques, and for their undergraduate research they study processes of explaining the logical and scientific problems.

5. Possibility of taking national qualifications and licenses to teach in junior and senior high school.
   In addition to a national qualification for judo therapists, you can acquire a first-class license to teach (health and physical education) in junior and senior high school.

Acupuncture Moxibustion Department

Acupuncture and moxibustion are used to treat and prevent illness by increasing the human body’s natural healing power. Its effectiveness is recognized by the WHO (World Health Organization) in treating various ailments such as pain in moving parts like the lower back and shoulders, gastrointestinal and gynecological difficulties. As well opening an independent practice, which is a given, you can acquire the skills to thrive in a variety of fields such as internal medicine, sports medicine, pediatrics, beauty care and more!

Unique Characteristics of Our School

1. Study that includes a good balance of Eastern and Western medicine.
   Specialists in both fields develop an overall practical learning. In particular the Eastern medicine curriculum is such as to allow thorough and careful study.

2. An emphasis on hands-on experience, with attached clinics.
   Teaching by top professors experienced in clinical pathology. With incremental training that includes the basics, applications, and clinical studies, the university offers various opportunities for practical experience both on and off campus.

3. A broad variety of fields of application, from sports to beauty care.
   Engage in comprehensive study of preventive and curative medicine for various illnesses, within the field of Eastern medicine that works on the inside of the body.

4. Deepen your ability to research acupuncture and moxibustion.
   Implementing research activities under highly skilled guidance, engage in in-depth examination of acupuncture and moxibustion treatment, and aim to ensure the future of acupuncture and moxibustion research.

5. Possibility of taking national qualifications and licenses to teach in junior and senior high school.
   In addition to a national qualification for acupuncture/moxibustion, you can acquire a first-class license to teach (health and physical education) in junior and senior high school.
Heisei Iryo Medical College was established as the “Heisei Judo Therapy Vocational College” in April 2000, with the National Judo Therapy, Acupuncture & Moxibustion Cooperative as its parent organization, by practitioners of judo therapy, acupuncture, moxibustion and amma massage. It was founded based on the ideal these medical practitioners had of passing on their skills to their successors themselves and upon being certified by the Ministry of Health and Welfare (now the Ministry of Health, Labour and Welfare) as a judo therapy training facility.

The model student envisioned by Heisei Iryo Medical College is “the medical professional of the next generation”. It is given that such people will acquire the knowledge and skills needed by society in the future, but we also aim to train people who will earn the trust of patients, possess a strong human quality that allows them to function within regional society, and have the capacity to become leaders of the medical industry in a variety of fields. There are still a great many things about the human body that modern medicine has been unable to explain. Our university is an environment where you can pursue specialized study while engaging in research in those unknown fields. We hope to increase, in any way we can, the number of people who can contribute to the medical industry as leaders of the next generation.

At the Judokai Therapy Department and the Acupuncture Moxibustion Department, by providing high-quality instruction based on Japanese traditional medicine, we have that modern medicine has been unable to explain. Our university is an environment where you can pursue specialized study while engaging in research in those unknown fields.

The National Judo Therapist Association was established in 1982 by judo therapists primarily based in Osaka, and in 1994 was reorganized as the National Judo Therapy, Acupuncture & Moxibustion Cooperative. The members of this National Judo Therapy, Acupuncture & Moxibustion Cooperative were actively practicing their therapy expressed their strong desire thus: “We want to train the next generation of practitioners ourselves, and we want to establish judo therapy and acupuncture/moxibustion as fields of academic study, and further advance the techniques of medical science.” From this desire, Takarazuka University of Medical and Health Care was born in 2011. Our university, through not only coordination with the attached Heisei University of Medical and Health Care, but also through our attached clinics and transmission of traditional medicine culture, interacts on a deep level with the local society. Based on the ideals of “regional coordination”, “practical study”, “international awareness” and “openness”, we encourage our faculty and students to actively communicate, promoting a unique learning environment centered on the students learning, thinking and acting.

We hope to admit students with a strong will to work for the good of the people. Not having concrete plans for the future yet is not an issue. Our instructors will make sure to train you for success. Our university is built on the foundation of staff, students and the local community all working together, and our mission is to give rise to experts in the fields of physical therapy, judo therapy and acupuncture/moxibustion who can take responsibility for society and tackle problems headon.

Our instructors bear these factors in mind at all times, as they engage in their daily operations and instruction of students. Furthermore, our students, when seeking employment, can receive support from the National Judo Therapy, Acupuncture & Moxibustion Cooperative in the region they choose, and should they seek to establish an independent clinic they can count on advice on a wide variety of areas such as setting up in the optimal location, management, staff training, etc.

Our students have a bright future ahead of them as alumni.
